Countries in yellow are endemic Countries in pale yellow are considered to have active transmission (i.e. within the previous 6 months) of an imported poliovirus

¹Data in WHO HQ on 11 March 2014 for 2014 data and 10 March 2015 for 2015 data. ²Wild viruses from environmental samples, contacts and other sources. ³In

March 2014, a serotype 1 wild poliovirus was detected in an environment specimen from Brazil, further investigation indicates this is an isolated event without

evidence of circulation. ⁴Results are based on L20B positive culture. Prior to reporting week 16, 2014, results were based on a combination of direct qRT-PCR on

RNA from concentrated sewage and L20B positive culture. ⁵The 2010 total includes cases with inadequate specimens that were exceptionally classified as confirmed

polio based on their association with the WPV1 outbreak. ⁶Includes 1 case in 2012 with a mixture of W1W3 virus. NA - Most recent case had onset prior to 1999.
